

CCTV · Networking · Office WiFi

One team to wire, secure, and connect your office.

Hopetech plans, installs, and supports the CCTV, network cabling, and WiFi that keep an office running — surveyed, installed. and handed over by people who answer the phone

afterwards.

Site survey included

Local support

Fixed quotes, no surprises

What we do

Four things, done properly

Each service stands on its own, or comes bundled as a single office fit-out — designed together so the cabling, coverage, and cameras actually work with each other.

CCTV & Surveillance

Camera placement planned around your actual entry points and blind spots, with recording and remote viewing set up before we leave.

Networking & Cabling

Structured cabling, switches, and racks laid out to handle your current headcount and the next round of growth.

Office WiFi

Access points sited for even coverage across every desk and meeting room, with guest and staff networks kept separate.

Office IT Setup

Workstations, printers, and shared drives configured and labelled, so a new hire's desk works on day one.

How a project runs

Survey to support, in five steps

The same sequence whether it's one camera or a full office move.

01

Site survey

We walk the space, check existing cabling and internet, and note where cameras and access points actually need to go.

02

Proposal

A fixed quote with equipment, layout, and timeline — no vague line items.

03

Installation

Cabling, mounting, and configuration, scheduled around your working hours where possible.

04

Testing

Every camera, port, and access point checked and demonstrated before we call it done.

05

Support

A point of contact for troubleshooting, moves, and additions after handover.

Why Hopetech

Fewer vendors, clearer answers

Most offices end up with a separate vendor for cameras, one for cabling, and one for WiFi — and no one who understands how the three connect.

One point of contact

The person who surveys your office is reachable after the install too.

Fixed, itemised quotes

You see equipment and labour costs separately before any work starts.

Built to grow

Cabling and switches sized for your next hire, not just your current headcount.

Documented handover

Passwords, network diagrams, and camera layouts, handed over — not left in one person's head.

Get in touch

Tell us about your office

Share your location and rough headcount, and we'll schedule a site survey.
